Coriell President Presents CPMC® at Affymetrix National Conference

On July 13, 15 and 17, 2009, Dr. Michael Christman, President and CEO of the Coriell Institute for Medical Research, traveled to Baltimore, MD; St. Louis, MO; and Los Angeles, CA, to present at The Affymetrix Medical Genomics Research Conference series.

The series featured a number of high-profile, published researchers and scientists using Affymetrix technology in their efforts to advance medical genomics research. The conference also presented pharmacogenomic research approaches to medical genomics, focusing particularly on panels for investigating drug metabolism markers and chromosome abnormalities. Additionally, the series covered the development of genomic databases for national and international cohorts.

During the conference, Dr. Christman presented the Coriell Personalized Medicine Collaborative® (CPMC®), which uses Affymetrix’s Genome-Wide Human SNP Array 6.0 and the D-MET drug metabolism chip to process saliva samples for its more than 4,000 participants.
